Milestone 3

Dec 17, 2019

Milestone	Date submitted for review/ feedback integrated
<i>Milestone 3</i>	<i>Dec 17, 2019</i>
<i>Milestone 2 version 1</i>	<i>Nov 12, 2019</i>
<i>Milestone 1 version 2</i>	<i>Oct 20, 2019</i>
<i>Milestone 1 version 1</i>	<i>Oct 07, 2019</i>

Section 1 – Steps to run an application

1. Run the script to create tables.
 - File Name – DBModel.sql
 - Location - <https://github.com/CSC675-775-03-database-systems/csc675-775-03-fall2019-01/tree/master/milestones/milestone3>
2. Run the script to insert data in each table.
 - File Name – test.sql
(you can run the complete script since delete queries are commented)
 - Location – <https://github.com/CSC675-775-03-database-systems/csc675-775-03-fall2019-01/tree/master/milestones/milestone3>
3. Checkout the application code from following location
 - Location - <https://github.com/CSC675-775-03-database-systems/csc675-775-03-fall2019-01/tree/master/application>
4. Configure database.js in model folder to match user's db permissions
5. Open the terminal and go to the application folder of the cloned repository.
6. Install dev dependencies by using the command: `npm install`
7. Run the application by using the command: `npm start`
8. Access the application at <http://localhost:3000/>

Note: On insert or delete actions, values of dropdown are not updated for rest of the action tabs. If you want to perform any action on new values, please refresh the URL to get the newly inserted values on tab switch.

Section 2: Contribution

Introduction to Database Systems - CSC 675-775 Contribution

Tejal Rajendra Ghadge

Hello,

Please find my contribution below:

Milestone 1:

- List of database entities and relationships
- Documentation

Milestone 2:

- Insert and Delete Queries
- Database model test
- Documentation

Milestone 3:

- Insert, Search, and Delete API
- Node App Initialization
- Documentation

Thanks,
Gem Angelo Lagman

Hello,

Please find my contribution below:

Milestone 1:

- ERD
- ERD test cases
- non-functional requirements
- Documentation

Milestone 2:

- Database model
- Forward Engineering of Model
- Documentation

Milestone 3:

- DBModel fixes
- Select and Delete UI and API integration
- Documentation

Thanks,
Tejal
